

This magazine, along with its maps and graphic designs, was created by Carthagéo students pursuing their Master's degree in 2024. The purpose of this selective educational program is to train professional cartographers and GIS hand geo-computer specialists.

Carthagéo operates through a collaboration involving three renowned Parisian institutions: Paris Panthéon-Sorbonne University, Paris Cité University, and the National School of Geographic Sciences (ENSG). The program offers courses in Mapping, Cartography, Spatial Analysis, Model Building, Model Design, Database Management, GIS and Computer Programming which make its students highly skilled future professionals. Carthagéo is built on a long-standing tradition of excellence in cartography at the Sorbonne that can be traced back to the founding of l'Ecole Supérieure de Cartographie in 1934.

The master benefits from technical and academic abilities and has forged ties with National Institute of Geographic and Forestry Information (IGN) and with several professional sectors such as Spatial Planning, Research, and Mapping Publication.

for new worlds

This year, the well known Space magazine made some changes. We chose a new editing process and a small change in the name : (S)PACE becomes SPACE, a more simple concept, working on some specific themes and geographical objects. The 2024 edition will deal with Mountains, a journey through the majestic yet intimidating mountain landscapes. For sports enthusiasts seeking vertiginous challenges, as well as for scientists to study the geological forces that have sculpted our planet, the mountain is a fascinating playground.

Excessive exploitation of natural resources in the mountains is threatening the fragile balance of its unique ecosystems. The bond between humanity and the mountain remains deep, combining admiration for its grandeur with a growing awareness of our responsibility to preserve it. Because of their immensity, mountains awaken a rich collective imagination, nourished by the contrasting emotions of freedom and fear they arouse in us. We invite you to rediscover the mountain as part of a global reflection. We hope you will enjoy this edition which will encourage you to put on your mountain boots and explore this stunning world !
